TECHNICAL SUMMARY

- 4 years of experience developing mobile, desktop, and web applications using technologies such as Java, Android, Javascript, and HTML5/CSS3 – from concept through deployment.
- Independently developed and published 2 Android applications ([SoFit](#), [Huddly](#)), and professionally contributed to 4 Android/iOS applications.
- Extensive knowledge of Salesforce administration and development.

TECHNICAL SKILLS & CERTIFICATIONS

- Java/J2EE, Android, SQL, Python, Javascript, JQuery, HTML5, CSS3, SQL, NoSQL, Git, Salesforce, Apex, Visualforce, Lightning, Mulesoft, NetSuite
- **Certifications:** Salesforce Administrator (ADM 201), Salesforce Platform Developer (DEV 450)

EXPERIENCE

Application Engineer, JUN 2016 - PRESENT - *iCIMS*

- Built a customer facing content curation system in Salesforce using Apex, Visualforce, and Custom Objects. This provides insight/analytics into potential product offering improvement.
- Eliminated manual import processes by building an API to integrate and sync accounts and opportunities between Salesforce and NetSuite using Java, Apex and Mulesoft.
- Streamlined partner lead generation process by developing Lead entry portal, effectively automating and eliminating manual processes.
- Leveraged workflow rules, validation rules, triggers and Apex daily to build standard/custom object related automation features within Salesforce. - REFINE THIS

Software Developer, JAN 2015 - JUN 2016 - *Limosys Software*

- Heavily contributed to the design and development of a flagship Android application.
- Reduced Google Geocoder API usage costs by 50% and improved application responsiveness by refactoring and optimizing code for Google Maps feature.
- Enhanced the security of web-service usage between clients by developing an API-Key generation / authorization system using Java, XML, and SQL.
- Generated additional revenue stream by building upon and optimizing an existing web-service which is now sold to clients.
- Improved bug resolution time by developing a library to provide detailed logs for unexpected crashes; as a result, developers can now easily locate and resolve issues.
- Decreased Android application deployment time significantly by writing style components and utility classes to improve application re-branding / theming for multiple clients.

Android Developer, AUG 2014 - DEC 2014 - *Fingertip Technology*

- Rapidly developed 2 minimum viable product (MVP) Android applications; reducing overall business project workload by 25% and generating revenue.
- Worked alongside back-end developers to integrate user authentication, registration, and login features into the front-end of Android applications.

EDUCATION

Brookdale Community College, 2013 Graduation - *A.S. Computer Science*

TESU, Currently Attending - *B.S. Computer Science*
